

Royal Children's Hospital (Melbourne)

Jakeman Business Solutions Pty Ltd (JBS) has been closely involved with the development and implementation of the new Royal Children's Hospital (RCH) in Melbourne. We have developed the Security Master Plan, Security Policies, Strategy, Integration and Operational Services. We worked closely with the State, the Hospital, the Developers and the Facilities Managers on the provision of a fully integrated security service.

OUR SERVICES TO THE RCH

Security Infrastructure Definition

The new RCH aims to be family friendly, open and integrated with the adjacent parkland. This presents unique challenges to ensuring this vision is achieved and the best approach to maintain the security and safety of staff, patients and visitors. JBS advocated a risk based, multi layered approach:

Risk Assessment

A risk assessment and management framework provided the basis of the security infrastructure design. This included consultation with staff members and local stakeholders.

Security Master Plan

The Security Master Plan captured all aspects of the Security Infrastructure including technical services, manpower services, training and response procedures.

Policies and Standards

JBS defined a series of Policies and Procedures which provided the guidelines for the implementation of the security infrastructure services.

Operational Infrastructure

JBS worked closely with the service providers, Hospital staff and facility managers to design a strategy for the implementation of security control systems and the integration with Hospital systems.

Operational Procedures

JBS has been working with the facility service providers to define the scope and structure of the operational manpower security services.

Test

Prior to final handover and acceptance of the facility, JBS will support a test programme to ensure all services operate as agreed.
